

MAKE YOUR VOICE COUNT & JOIN USR TODAY!

ADVOCACY

We move strongly as a group to advance policies that improve patient care and ensure adequate reimbursement for sustainable quality care.

INVENTORY MANAGEMENT

Our inventory solution offers multiple options to meet practice-specific needs including inventory tracking using barcode scanning or RFID tracking and operational dashboards and management reporting.

BENCHMARKING

Participating member practices benefit from in-depth insights into de-identified financial metrics, enabling more informed and confident decision-making.

GROUP PURCHASING

We realize cost-savings together while enhancing practice efficiencies to improve the practice bottom line.

DATA ANALYTICS

We leverage data to create actionable insights to improve retina care by detecting, understanding, and predicting trends.

CLINICAL RESEARCH

Our network serves as a conduit for clinical trials and through the efforts of our physicians, staff, and patients, the approval of several treatments are now considered to be the standard of care. Involvement in clinical research offers our patients access to new and potentially superior treatments for sight-threatening conditions.

USRETINA GPO TEAM

The USRetina GPO team's mission is to benefit all USRetina GPO members, large or small, and to develop industry partnerships that are better and stronger than any relationship obtainable by individual practices.

Together, we are stronger.

Dee Cantrell, RN, BSN, MS, FHIMSS

USRETINA MISSION

Hundreds of member practices are united by a common mission to provide the best quality patient care possible while sustaining independent community practice status.

We are a physician-led organization that unites like-minded physicians and clinicians around a powerful vision of improving patient outcomes and quality of life. USRetina works with industry and clinical organizations to create new opportunities for patients to receive timely and quality retina care throughout the United States with access and affordability.

Using data systems, we strive to help our practices achieve the quadruple aim of access, quality, cost-containment, and physician and patient satisfaction. Combined, this allows optimization of the practice's MIPS score. Put simply, we hold ourselves to high standards. Our clinical outcomes, practice efficiencies, and attention to individual patient satisfaction are proof of these commitments.

GROUP PURCHASING

We realize cost-savings together while improving practice efficiencies to improve your bottom line.

The US Retina Group Purchasing Organization membership subscription is a free program benefiting hundreds of participants. We maintain relationships with numerous companies and device manufacturers in the retina space. Many products and services are available to members at discounted prices such as injectable drugs, surgical and non-surgical consumables, office supplies and more.

Our mission is to obtain market-leading pricing for our members regardless of practice size or location. Our exclusive partnerships enable our individual practices to realize cost containment, higher quality service, and economies of scale typically only available to large group practices and health systems.

CLINICAL TRIALS NETWORK

Our practices are leaders in recruitment and reliable study data.

USRetina Clinical Trial Network sites maintain a high level of patient care, advanced technology, and attention to regulatory detail. We understand the challenges of bringing Phase I to Phase III clinical trials to fruition, from start to finish. We have a robust standardized process, based on federal regulations, to support all sites. Our network serves as a conduit for pharma partners and research sites to realize efficient site and patient recruitment.

We focus on accurate and timely delivery of clinical trial data that ultimately enhances the drug development process. Our network policies and procedures help eliminate variability between sites, improving the reliability and value of the network as a whole.

RETINA ADVOCACY

We move strongly as a group to advance policies that improve patient care and ensure adequate reimbursement for sustainable quality care.

Practitioners in retina are under increasing scrutiny to justify and defend their treatment choices. Cost containment measures are putting pressure on practices. At US Retina, a key goal is to help shape national policy to enhance healthcare quality, reduce waste, and save sight through preventative care and pharmacological therapies. Our leadership has advocated before the Centers for Medicare and Medicaid Innovation and other federal and state agencies. To this end, the US Retina public affairs and advocacy team has connections and representation in Washington, D.C.

We support a number of key initiatives through AAO and ASRS, and our members augment these efforts regularly.

INVENTORY MANAGEMENT

The USIT (USRetina Inventory Tracking) system was designed to meet the specific needs of USRetina members. USIT provides a comprehensive drill down dashboard as well as alerts for expiring inventory, inventory replenishment, and unassigned inventory. The system includes integration capabilities and leverages either barcode scanning or RFID tagging for managing the inventory process. USIT is enhanced regularly based on direct feedback from our practices as part of our continuous improvement culture.

Benefits Include

- Interprets and processes the information provided in barcodes that meet the FDAs Unique Device Identification (UDI) standards
- Interacts with Practice Management and EMR systems to create more seamless workflow
- Provides an integrated dashboard showing highly valuable inventory related data analytics (by item, by physician, by location, etc.)
- Offers robust inventory management tracking reports – items, patients, physicians, par levels, expired drug, charity care, false profit, and many others
- Provides secure user access and auditing capability
- Leverages Cloud Services
- Complies with HIPAA Regulations

DATA ANALYTICS

USRetina's members leverage data to create actionable insights to improve retina care by detecting, understanding, and predicting trends. As a group we are seeking answers to important clinical and pharma research questions. USRetina's ability to aggregate and analyze de-identified member data is enabling breakthroughs in retina care. Practices large and small across the United States participate in building infrastructure by providing data feed connections to help USR achieve our mission and benefit our member practices.

We are working to leverage valuable data assets through reporting and analytics projects such as disease-specific analysis, physician benchmarks, MIPS / MACRA quality measures, and other initiatives.

Supporting clinical trials efforts for advancing the future of eye care is one of our highest priorities and our robust analytics platform allows us to:

- Assist in identifying potential clinical trial candidates
- Respond to post-marketing drug safety surveys
- Integrate with pharmacovigilance programs
- Assess clinical outcomes across patient populations for enhancing care protocols
- Provide information on clinical outcomes and the cost of care
- Provide evidence to proactively advocate for new best practices

As part of our continuous learning environment and promotion of shared best practices across our members, we offer an annual operational benchmarking program. This program was designed by a team of USRetina practice administrators and allows our members to compare and contract operational metrics with their peers and identify opportunities for improvement.
